

Incremental Heading Fixture

Fixture Author

October 26, 2026

1 Introduction

This introductory section introduces the headings fixture. It contains the distinctive term `headingfixture-zephyr`, which appears nowhere else in the document, and is used by the tests to confirm that body text written under a section heading is extracted faithfully. The paragraph is intentionally long enough to wrap onto several lines so that extraction must reassemble wrapped lines correctly.

2 Core Findings

A second top-level section follows the introduction and discusses the main observations of the fixture. It provides a second standalone heading so that tests can distinguish between multiple top-level sections rather than relying on a single one.

2.1 Methodology

The methodology subsection describes how the fixture was produced. It repeats the unique marker `headingfixture-zephyr` in a different paragraph so that the content assertion remains robust whether or not the first occurrence survives extraction intact.

2.2 Results

Results are summarized in plain prose here. Additional filler text about measurement tolerances and instrument calibration ensures the subsection contains enough content to be worth asserting on.

3 Conclusion

The conclusion wraps up the headings fixture and reiterates that the title and section structure should be preserved in the extracted markdown so that heading levels remain visible to downstream consumers.
